Inserting Screenshot

Sometimes you want to print a portion on what is in your screen, or screenshot of what you are working in your computer like the applications you are using. From your pictures collection or from the web, with this new version of Word, taking a screenshot is really a painless experience.

Insert Screenshot

- 1 Click the Insert tab.
- 2 Click Screenshots.

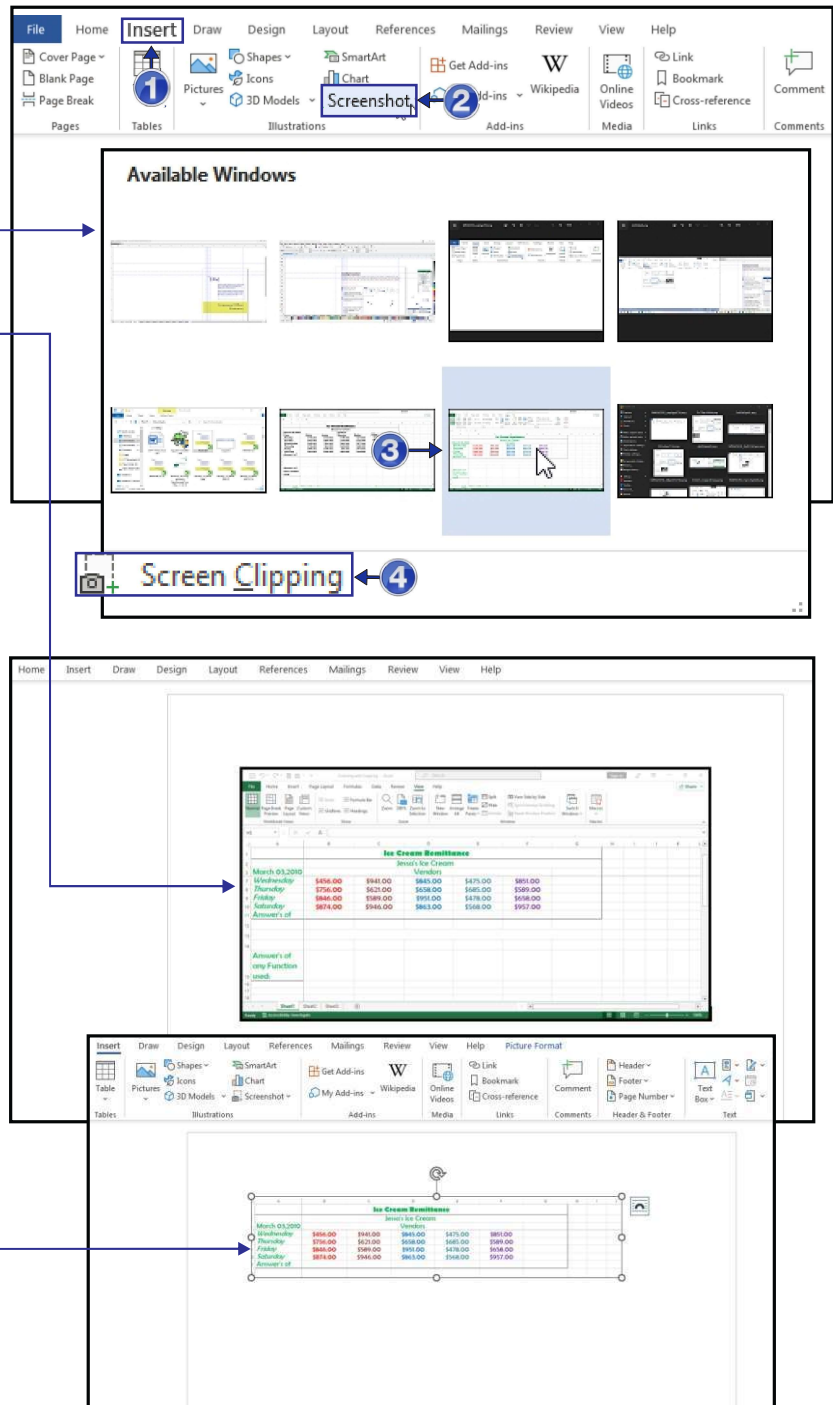

Microsoft Word automatically display a thumbnail of image of every Window you have open at the moment.

- 3 Click one of the thumbnail and it will be inserted into the current document.

If you want a quick snapshot of part of the screen, click Screen Clipping button below.

Then highlight or mark a screen portion by holding-down the left mouse button while dragging the mouse- to define the portion of the screen you want to capture.

In the Illustration below, portion or part of MS Excel window has been captured and inserted to the current document.

Inserting a Picture

In this digital age, photos or what we call pictures can easily be produced and managed as well as incorporating it to your Office files. For example, if you have a photo or graphic file that relates to your Excel data, you can insert it into the worksheet. After you insert an image, you can resize, reposition, rotate, and flip it. You can also perform other types of editing on the image, such as cropping, image correction, color correction, and more. Office also includes several tools, called filters, use for applying artistic effects to images you insert in the files.

Insert a Picture

- 1 Click the area where you want to add a picture. You can move the image to a different location after inserting it into the page.
- 2 Click the Insert tab.
- 3 Click Illustration, Pick Pictures.
- 4 The insert picture form show, click This device.
- 5 The Insert Picture dialog box will appear.
- 6 Navigate to the folder or drive containing the image file that you want to use.
- 7 Click the file that you want to add.
- 8 Click Insert tab.

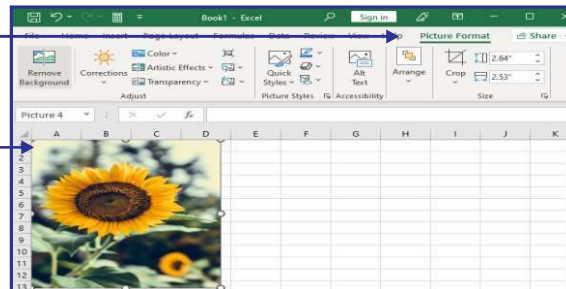

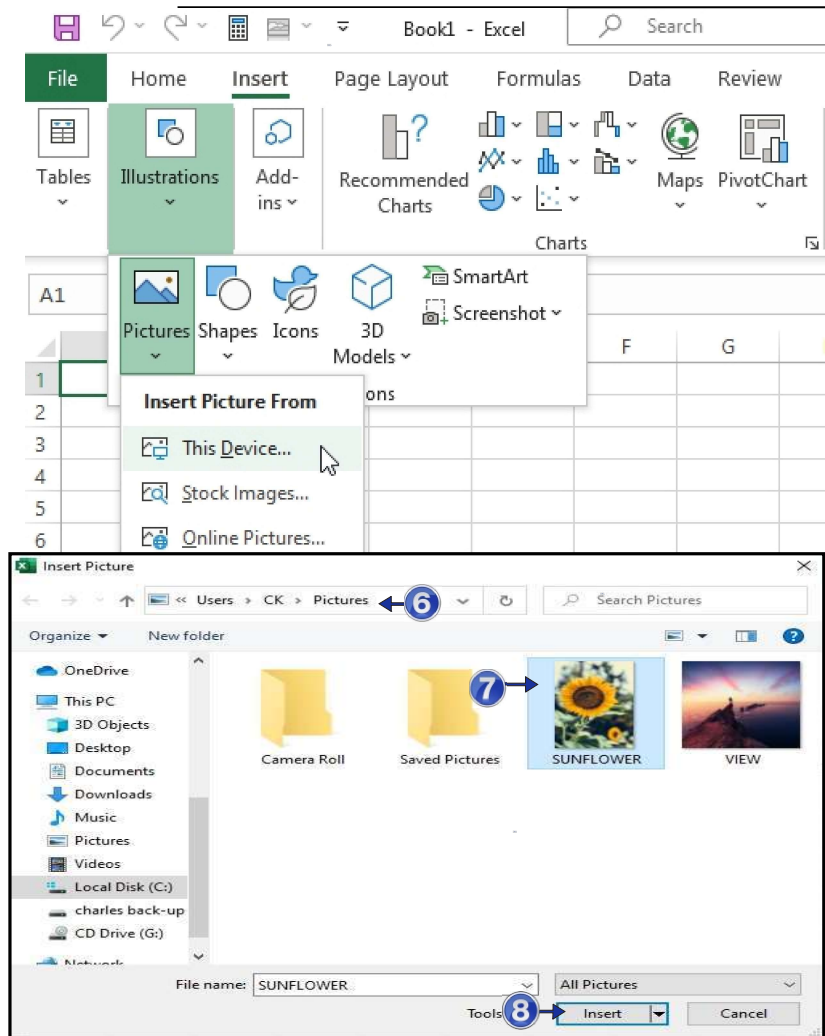

Note: Image files, also called objects, come in a variety of file formats, including GIF, JPEG, and PNG.

The Picture tools appear on the Format tab.

The picture is added to the file.

You may need to resize or reposition the picture to fit the space.

Note: See the "Resize and Move Objects" section to learn more. To remove a picture that you no longer want, you can click the picture and press (Delete).

Resizing and Moving Objects

Images and clip arts, such as SmartArt and WordArt are called *objects*. When you insert an object, such as an image, into an Office file, you may find that you need to make it larger or smaller in order to achieve the desired effect. Fortunately, doing it is so easy. When you select an object in an Office file, handles appear around that object; you can use these handles to make the object larger or smaller.

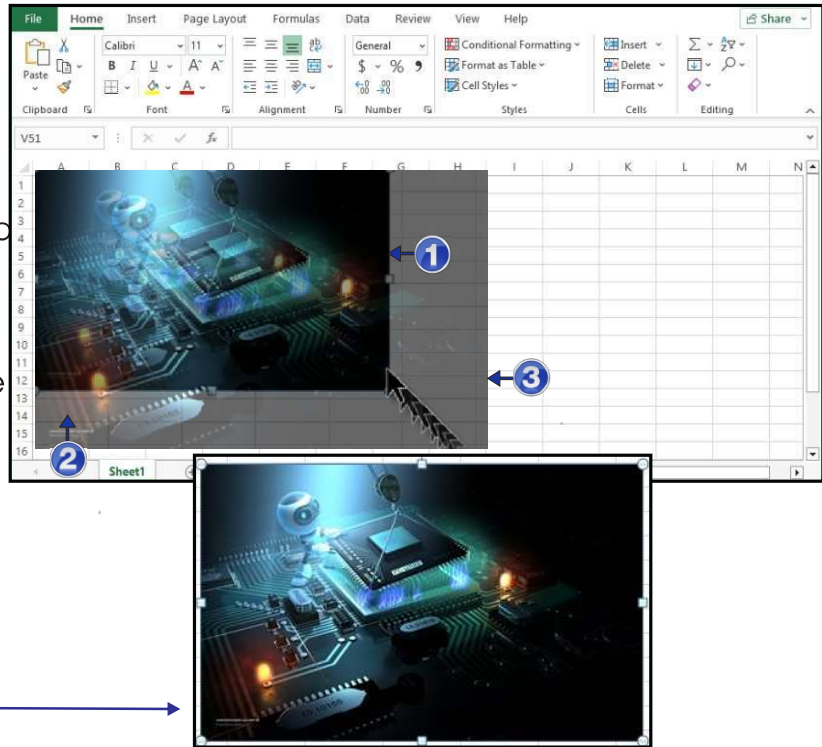

Resize and Move Objects

Resize an Object

- 1 Click the object that you want to resize.
- 2 Click a selection handle.
- 3 Drag inward or outward to resize the object.

Note: To maintain an object's height-to-width ratio when resizing, drag one of the corner handles.

When you release the mouse button, the object is resized.

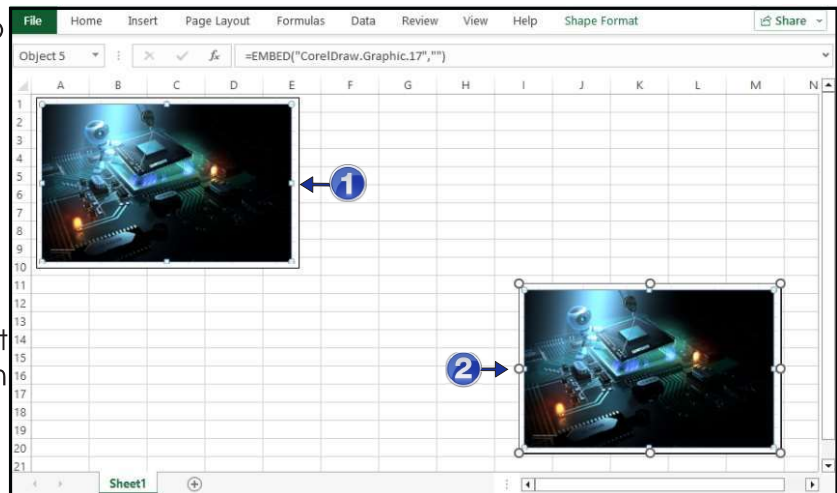

Move an Object

- 1 Click the object that you want to move.
- 2 Drag the object to a new location on the worksheet.

When you release the mouse button, the object moves to the new location.

Note: You can also move an object by cutting it from its current location and pasting it in the desired spot.

Rotate and Flip Objects

After you insert an object such as a piece of clip art or a photo from your hard drive into a Word document, an Excel worksheet, a PowerPoint slide, or a Publisher brochure, you may find that the object appears upside down or inverted. To rectify this, you can rotate or flip the object. For example, you want to flip a clip art image to face another direction, or rotate an arrow object to point elsewhere on the page. Alternatively, you want to rotate or flip an object that you place in an Office file to change the appearance of that object.

Rotate and Flip Objects

Rotate an Object

- 1 Click the object that you want to rotate.

A rotation handle appears on the selected object.

- 2 Click and drag the handle to rotate the object.

When you release the mouse, the object rotates.

Note: You can also use the Rotate button (🔄) on the Format tab on the Ribbon to rotate an object 90 degrees left or right.

Flip an Object

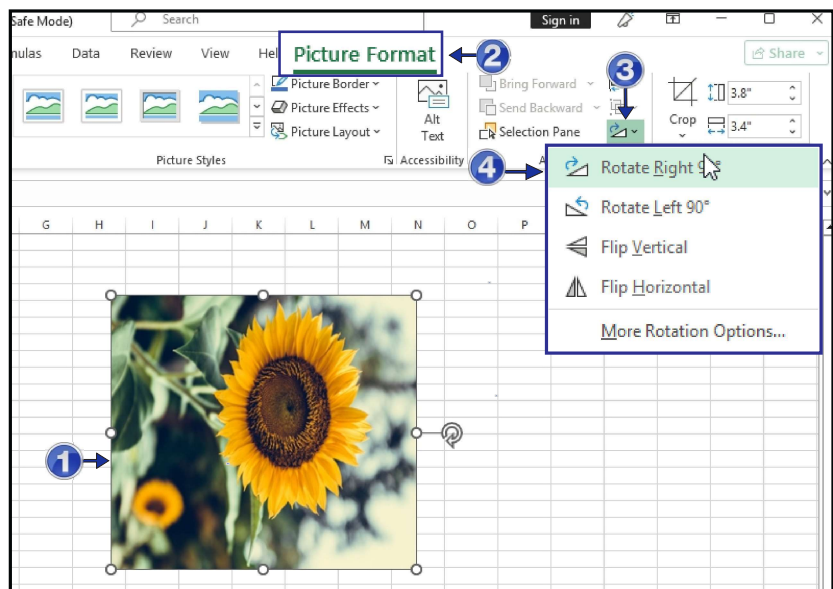

- 1 Click the object that you want to flip. The Format tab opens and displays the Picture tools.

- 2 Click the Picture Format.

- 3 Click the Rotate button (🔄) on the Format tab.

- 4 Click Flip Vertical or Flip Horizontal.

The object flip.

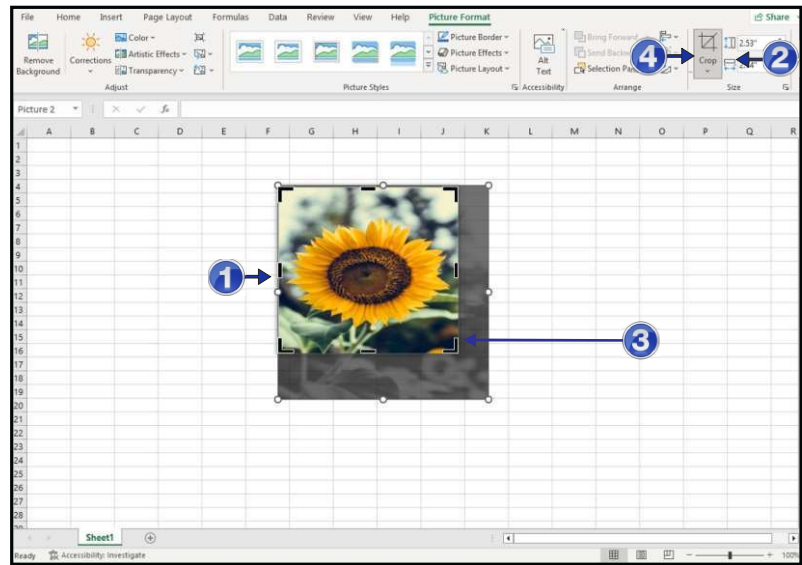

Cropping a Picture

In addition to resizing an Office object, such as clip art image or a photo you have stored on your computer's hard drive, you can use the Crop tool to crop it. When you crop an object, you will remove and vertical and/or horizontal edges of the object. For example, you want to use the Crop tool to create a better fit, to omit a portion of the image, or to focus the viewer on an important area of the image. The Crop tool is located on the Format tab on the Ribbon, which appears when you click the object you want to crop.

Crop a Picture

- 1 Click the image that you want to edit.
The Format tab opens and displays the Picture tools.
- 2 Click the Crop button.
- 3 Click and drag a crop handle to crop out an area of the image.
- 4 Click again the crop button to complete the operation.

Add a Picture Effect

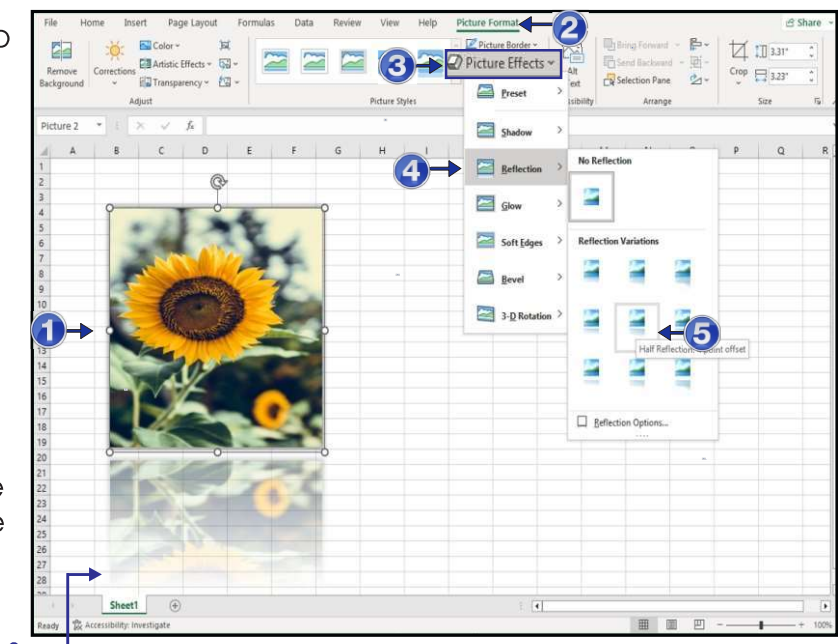

You can use the Picture Effect tool included with many Office programs to assign unique and interesting special effects to your objects. For example, you can apply a shadow effect, create a mirrored reflection, apply a glow effect, soften the object's edges, make a bevel effect, or generate a 3D rotation effect to an object.

Add a Picture Effect

- 2 Click the Format tab.
- 3 In the Picture Styles group, click the Picture Effects button.
- 4 Click an effect category.
- 5 Click an effect style.

As you drag over each effect in the menu, the picture displays what the effect looks like when you apply it.

The new effect is applied pice.

Make Image Corrections

Office offers useful tool such as image corrections. Perhaps the image you have inserted is slightly blurry, or lacks contrast. Fortunately, Office offers tools that enable you to make corrections to clip art and images even after they have been inserted into your file. For example, you can sharpen and soften images, as well as adjust their brightness and contrast. You need to access the image correction tools from the Format tab on the Ribbon.

Make Image Corrections

- 1 Click the picture that you want to edit. The Format tab appears on the Ribbon with the Picture tools shown.

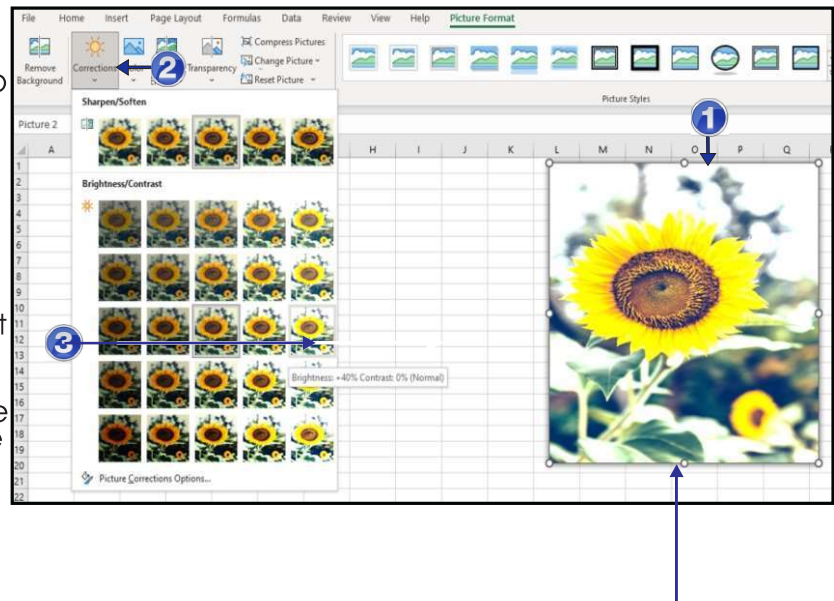

- 2 In the Adjust group, click the Corrections button.

Office highlights the image's current correction settings.

As you drag over each setting in the menu, the picture displays what the setting looks like when you apply it.

- 3 Click a correction setting.

The new setting is applied.

Making Color Adjustments

Photoshop's image editing feature is in Office in easy step, you can change and adjust Color Saturation, Color Tone, and Recolor to a picture. The Color Saturation tool enables you to make the color in your image more or less intense; the Color Tone tool enables you to make the colors in your image appear warmer or cooler; and the Recolor tool enables you to apply a color cast to your image. You can also use these tools to apply artistic effects to an image, such as converting the color of an image to black and white.

Make Color Adjustments

- 1 Click the picture that you want to edit. The Format tab appears on the Ribbon with the Picture tools shown.

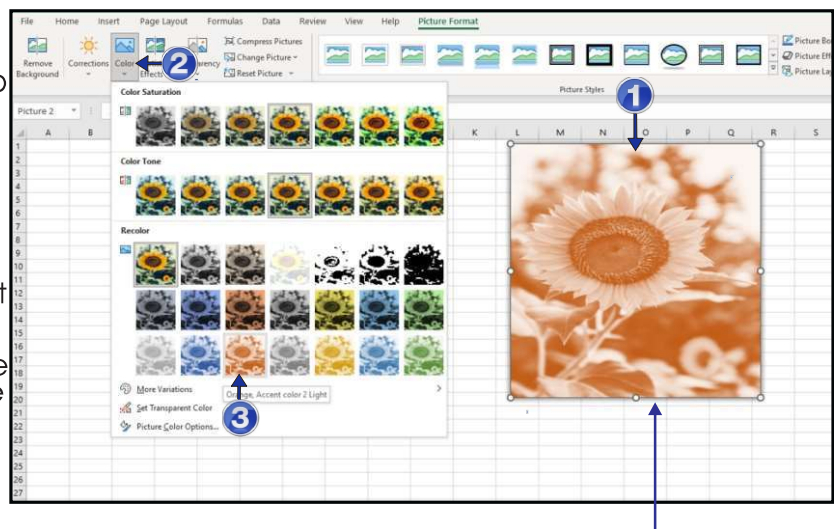

- 2 In the Adjust group, click the Color button.

Applying Artistic Effects

Office includes several tools, called filters, for applying artistic effects to images and clip art in order to enhance them. You can apply an artistic effect to an image to make that image appear as though it was rendered in marker, pencil, chalk, or paint. Applying certain other filters creates an effect reminiscent of mosaics, film grain, or glass. You can access these artistic effects from the Format tab on the Ribbon.

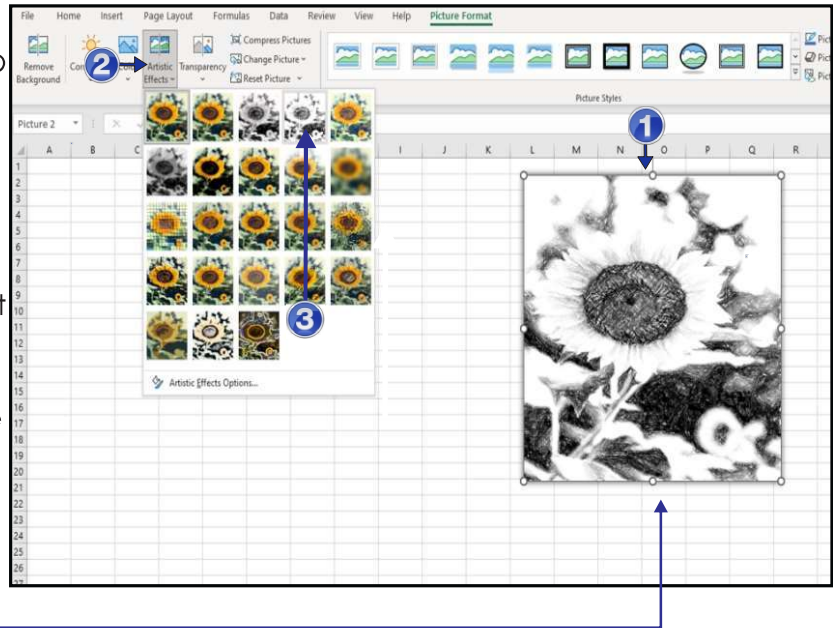

Apply Artistic Effects

- 1 Click the picture that you want to edit. The Format tab appears on the Ribbon with the Picture tools shown.
- 2 In the Adjust group, click the Artistic Effects button.

Office highlights the image's current effect.

As you drag over each effect in the menu, the picture displays what the effect looks like when you apply it.
- 3 Click an artistic effect.

The new effect is applied to the picture.

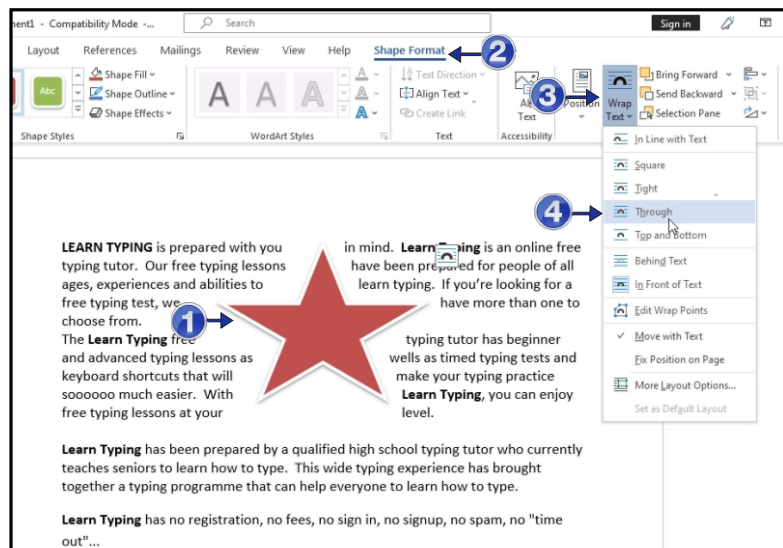

Text Wrapping Around Graphic

Text wrap is a Word feature that enables you to surround a graphic or picture with text; the text wraps around the graphic. You can control the way that Word wraps text around a graphic image in your document. This becomes very important when you want to place graphics in a document where space is at a premium, such as a two-column newsletter.

- 1 Click a graphic.

Handles (■, □, or □) will appear around the image.
- 2 Click the Shape Format tab.
- 3 Click Wrap Text.
- 4 Click the wrapping style that you want to apply.

Wrap Text Around a Graphic wraps the text around the graphic using the text wrapping option you selected.

Creating a WordArt Object

WordArt has been the world's most favorite for decades already. This feature turns text into interesting graphic objects to use in your Office files. For example, you can create arched text to appear over a range of data in Excel, or vertical text to appear next to a paragraph in Word. You can create text graphics that bend and twist, or display a subtle shading of color. You can access the various WordArt options from the Insert tab on the Ribbon. After you convert text into a WordArt object, you can resize, move, rotate, and flip that object just as you would any other object in Office.

- 7 Click Transform.
- 8 Click a transform style that you want to apply.

The WordArt object is transformed.

You can resize or move the image.

You can click the Quick Styles button to change the text style.

You can click these buttons to change the text outline color  and text fill color .

Adding SmartArt

The SmartArt feature creates all kinds of diagrams to illustrate concepts and processes in your Office files. For example, you will insert a diagram in a document to show the organizational chart of your school or hierarchy of your family. Office includes several predefined diagram to choose from, including list, process, cycle, hierarchy, relationship, matrix, pyramid, and picture. In addition, you can choose from several diagram styles within each type. For example, if you choose to create a hierarchy diagram, you can choose from several styles of hierarchy diagrams.
